# Do Your I.T. Systems

deliver what you need?

## ASK YOURSELF:

- How much has your business changed since you implemented your current I.T. systems?
- How many staff changes have you had since then?
- Do your current staff really have a full knowledge of functions that could either save or make you money?
- What business benefits are others getting from their I.T. systems which you are missing out on?

## YOU MAY BE THINKING:

- What am I missing out on?
- What do I need to do?
- Should I be considering other hardware and software or simply utilise my existing investment more effectively?
- What will the cost be to optimise my existing systems?
- What is the measurable financial benefit to my business?

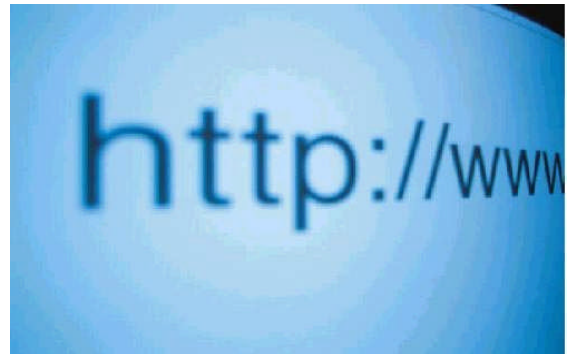

**A Quell Systems Audit will help to answer these questions.**

## WHAT DOES AN I.T. SYSTEMS AUDIT CONSIST OF?

- A review of your current systems utilisation.
- A review of your business needs and how far your system currently supports them.
- A discussion of your systems strengths and weaknesses with key staff.

## WHAT DOES THE AUDIT DELIVER?

- Identification of possible areas of improvement.
- Identification of both the internal and external costs of implementing improvements.
- Prioritisation of the areas which will achieve the most benefit for the least outlay.
- A detailed report which will focus management on the achievement of short term business advantage

**Quell Systems is a company established to provide Business Systems Integration for forward thinking companies:**
