

Systems Development

We have a wealth of experience developing software systems. We have experienced a wide range of working practices and can advise on software application issues as well as help with the hands-on development. Our team have a wide variety of software development skills.

We deliver solutions that meet your requirements, catering for your future development needs with easy to use, easy to maintain systems, conforming to approved development methods.

Our number one goal is always customer satisfaction. We strive to ensure that all of our software is developed on time and to a consistently high quality. Our developers are highly skilled and take great satisfaction in the work that they produce. Skills include, but are not limited to:

Data and Systems Migration

Migration of systems from Desktop to Client/Server

Downsizing (e.g. mainframe to Client/Server)

Consolidation of disparate systems

Cross-platform data and systems migration
